

VARIOTRAC

VARIOTRAC are versatile self-propelled machines specifically designed and manufactured for 15 years by PLAISANCE EQUIPEMENTS for heavy duty works. Its design allows to adapt forestry mulcher, snow blower, chipper, shoulder mower, stone crusher...

The light weight together with four direct-drive wheels allows VARIOTRAC best crossing abilities. Strengthened forest tires, built-in reinforcement and FOPS-ROPS cab guarantee VARIOTRAC best security, even in the most extreme conditions.

Mechanical PTO allows the use of many different equipments, with an optimal efficiency. With 160 up to 410 hp engines, no work is out of their range.

Technical features

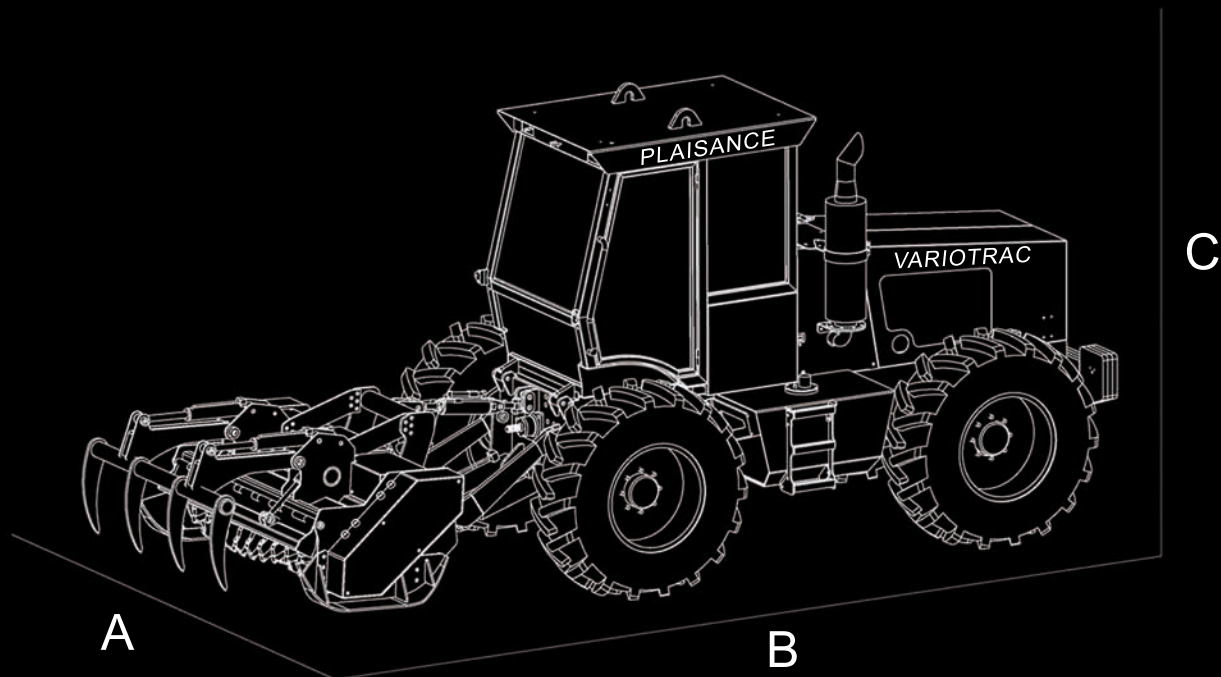

PLAISANCE EQUIPEMENTS VARIOTRAC are machines designed to be light and compact. They are based on High Tensile Strength steel chassis, giving them lightness and sturdiness. Their size and the four configurable direct-drive wheels (idler wheels, crab steering, front wheel drive) allow to work in narrow areas.

In order to take the best use of the power available through the mechanical PTO, VARIOTRAC are equipped with Suptronic system, which guarantees optimum driving speed depending on mulching head load. An engine anti-stall system allows the best engine use, minimizing the failure risks, while ensuring optimal efficiency.

The hydrostatic transmission with two speed ranges is controlled by foot pedal. Different tool functions are controlled by joystick. Windows are made of harden polycarbonate to ensure driver security against projections.

VARIOTRAC allows easy transfer between sites, without using trailer for small distance.

Model	Power (hp)	A Width (mm)	B Length (mm)	C Height (mm)	Approx. weight (kg)
VT 100	160	2 200	6 580	2 700	7 220
VT 300	270	2 300	6 720	2 930	8 700
VT 400	410	2 700	7 900	3 040	12 400
